

Travia — AI Travel Planning Platform

Student: Hetvi Sheth

Department: Computer Science Engineering

Institute: Navrachana University

Abstract

Travia is an AI-powered travel planning platform developed during a hackathon.

The application generates AI-based travel itineraries and budget analytics.

Leaflet integration enabled interactive map visualization.

JWT authentication was used for secure user login and session handling.

The full-stack application was completed within 8 hours.

Technologies Used

Technology Stack
React, Node.js, PostgreSQL, Leaflet, JWT

Future Scope

This project can be extended with advanced AI models, cloud deployment, real-time scalability, and improved datasets for better accuracy and performance.

Conclusion

The project demonstrates practical implementation of AI, machine learning, or software technologies to solve real-world problems effectively.
